In untypical cases, it is necessary to check the conditions of using KAN-therm parts with technical and information materials or opinions of the KAN Technical Department. Use the form – Inquiry about the possibility to use KAN-therm elements – to send basic parameters of an installation operation. Based on the data sent, the Technical Department will assess the fitness of the system to the particular installation. The form can be found on the website. Scan the QR code to fill in the electronic form quickly.

5	20	14	90	1	100	100	High temperature radiators
	60	25					
	80	10					

NOTE: This International Standard is only applicable to sealed systems which do not have values of T_D, T_{max} and T_{mal} in excess of those stated for class 5

^a Where more than one design temperature appears for any class, the times should be aggregated (e.g. the design temperature profile for 50 years for class 5 is 20 °C for 14 years, followed by 60 °C for 25 years, 80 °C for 10 years, 90 °C for 1 year and 100 °C for 100 h).

^b Depending upon international, national or local regulations.
